## Remembering subresults (Part I): Well-formed substring tables

Detmar Meurers: Intro to Computational Linguistics I OSU, LING 684.01, 12. February 2004

## Problem: Inefficiency of recomputing subresults

Two example sentences and their potential analysis:
(1) He [gave [the young cat] [to Bill]].
(2) He [gave [the young cat] [some milk]].

The corresponding grammar rules:

```
vp ---> [v_ditrans, np, pp_to].
vp ---> [v_ditrans, np, np].
```

## Solution: Memoization

- Store intermediate results:
a) completely analyzed constituents: well-formed substring table or (passive) chart
b) partial and complete analyses: (active) chart
- All intermediate results need to be stored for completeness.
- All possible solutions are explored in parallel.

## CFG Parsing: The Cocke Younger Kasami Algorithm

- Grammar has to be in Chomsky Normal Form (CNF), only
- RHS with a single terminal: $A \rightarrow a$
- RHS with two non-terminals: $A \rightarrow B C$
- no $\epsilon$ rules $(A \rightarrow \epsilon)$
- A representation of the string showing positions and word indices:

$$
{ }_{0} w_{1} \cdot{ }_{1} w_{2} \cdot{ }_{2} w_{3} \cdot{ }_{3} w_{4} \cdot{ }_{4} w_{5} \cdot{ }_{5} w_{6} \cdot{ }_{6}
$$

For example: $\quad{ }_{0}$ the $\cdot_{1}$ young ${ }_{2}$ boy $\cdot_{3}$ saw ${ }_{4}$ the ${ }_{5}$ dragon ${ }_{6}$

## The well-formed substring table (= passive chart)

- The well-formed substring table, henceforth (passive) chart, for a string of length $n$ is an $n \times n$ matrix.
- The field $(i, j)$ of the chart encodes the set of all categories of constituents that start at position $i$ and end at position $j$, i.e. $\operatorname{chart}(\mathrm{i}, \mathrm{j})=\left\{A \mid A \Rightarrow^{*} w_{i+1} \ldots w_{j}\right\}$
- The matrix is triangular since no constituent ends before it starts.

## Coverage Represented in the Chart

An input sentence with 6 words:

$$
{ }_{0} w_{1} \cdot{ }_{1} w_{2}{ }_{2} w_{3} \cdot{ }_{3} w_{4} \cdot{ }_{4} w_{5}{ }_{5} w_{6}{ }_{6}
$$

Coverage represented in the chart:

FROM: |  | 1 | 2 | 3 | 4 | 5 | 6 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 0 | $0-1$ | $0-2$ | $0-3$ | $0-4$ | $0-5$ | $0-6$ |
| 1 |  | $1-2$ | $1-3$ | $1-4$ | $1-5$ | $1-6$ |
| 2 |  |  | $2-3$ | $2-4$ | $2-5$ | $2-6$ |
| 3 |  |  |  | $3-4$ | $3-5$ | $3-6$ |
| 4 |  |  |  |  | $4-5$ | $4-6$ |
| 5 |  |  |  |  |  | $5-6$ |

## Example for Coverage Represented in Chart

Example sentence:
${ }_{0}$ the ${ }_{1}$ young ${ }_{2}$ boy ${ }_{3}$ saw $\cdot{ }_{4}$ the ${ }_{5}$ dragon ${ }_{6}$

Coverage represented in chart:

|  | 1 | 2 | 3 | 4 | 5 | 6 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 0 | the | the young | the young boy | the young boy saw | the young boy saw the | the young boy saw the dragon |
| 1 |  | young | young boy | young boy saw | young boy saw the | young boy saw the dragon |
| 2 |  |  | boy | boy saw | boy saw the | boy saw the dragon |
| 3 |  |  |  | saw | saw the | saw the dragon |
| 4 |  |  |  |  | the | the dragon |
| 5 |  |  |  |  |  | dragon |

## An Example for a Filled-in Chart

## Input sentence:

${ }_{0}$ the ${ }_{1}$ young ${ }_{2}$ boy $\cdot_{3}$ saw $\cdot_{4}$ the ${ }_{5}$ dragon ${ }_{6}$

## Chart:

|  | 1 | 2 | 3 | 4 | 5 | 6 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 0 | $\{$ Det $\}$ | $\}$ | $\{N P\}$ | $\}$ | $\}$ | $\{S\}$ |
| 1 |  | $\{\operatorname{Adj}\}$ | $\{N\}$ | $\}$ | $\}$ | $\}$ |
| 2 |  |  | $\{N\}$ | $\}$ | $\}$ | $\}$ |
| 3 |  |  |  | $\{\mathrm{~V}, \mathrm{~N}\}$ | $\}$ | $\{\mathrm{VP}\}$ |
| 4 |  |  |  |  | $\{$ Det $\}$ | $\{\mathrm{NP}\}$ |
| 5 |  |  |  |  |  | $\{\mathrm{~N}\}$ |

Grammar:
$S \rightarrow N P V P$
$\mathrm{VP} \rightarrow \mathrm{Vt}$ NP
$N P \rightarrow \operatorname{Det} N$
$\mathrm{N} \rightarrow$ Adj N
Vt $\rightarrow$ saw
Det $\rightarrow$ the
Det $\rightarrow$ a
$N \rightarrow$ dragon
$\mathrm{N} \rightarrow$ boy
$\mathrm{N} \rightarrow$ saw
Adj $\rightarrow$ young

## Filling in the Chart

- It is important to fill in the chart systematically.
- We build all constituents that end at a certain point before we build constituents that end at a later point.

|  | 1 | 2 | 3 | 4 | 5 | 6 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 0 |  |  |  |  |  |  |
| 1 |  |  |  |  |  |  |
| 2 |  |  |  |  |  |  |
| 3 |  |  |  |  |  |  |
| 4 |  |  |  |  |  |  |
| 5 |  |  |  |  |  |  |

$$
\begin{aligned}
& \text { for } j:=1 \text { to length }(\text { string }) \\
& \text { } \quad \text { exical_chart_fill }(j-1, j) \\
& \quad \text { for } i:=j-2 \text { down to } 0 \\
& \\
& \\
& \quad \text { syntactic_chart_fill }(i, j)
\end{aligned}
$$

| 4 |  |  |  |  | 11 | 17 |
| 5 |  |  |  |  |  | 16 |

$$
\begin{aligned}
& \text { for } j:=1 \text { to length }(\text { string }) \\
& \text { lexical_chart_fill }(j-1, j) \\
& \quad \text { for } i:=j-2 \text { down to } 0 \\
& \\
& \quad \text { syntactic_chart_fill }(i, j)
\end{aligned}
$$

## Filling in the Chart

- It is important to fill in the chart systematically.
- We build all constituents that end at a certain point before we build constituents that end at a later point.

|  | 1 | 2 | 3 | 4 | 5 | 6 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 1 | 3 | 6 | 10 | 15 | 21 |
| 1 |  | 2 | 5 | 9 | 14 | 20 |
| 2 |  |  | 4 | $\mathbf{8}$ | 13 | 19 |
| 3 |  |  |  | 7 | 12 | 18 |
| 4 |  |  |  |  | 11 | 17 |
| 5 |  |  |  |  |  | 16 |

$$
\begin{aligned}
& \text { for } j:=1 \text { to length }(\text { string }) \\
& \text { } \quad \text { exical_chart_fill }(j-1, j) \\
& \quad \text { for } i:=j-2 \text { down to } 0 \\
& \\
& \\
& \quad \text { syntactic_chart_fill }(i, j)
\end{aligned}
$$

## lexical_chart_fill(j-1,j)

- Idea: Lexical lookup. Fill the field $(j-1, j)$ in the chart with the preterminal category dominating word $j$.
- Realized as:

$$
\operatorname{chart}(j-1, j):=\left\{\mathrm{X} \mid \mathrm{X} \rightarrow \operatorname{word}_{j} \in \mathrm{P}\right\}
$$

## syntactic_chart_fill(i,j)

- Idea: Perform all reduction step using syntactic rules such that the reduced symbol covers the string from $i$ to $j$.
- Realized as: $\operatorname{chart}(i, j)=\left\{\begin{array}{l|l}A & \begin{array}{l}A \rightarrow B C \in P, \\ i<k<j, \\ B \in \operatorname{chart}(i, k), \\ C \in \operatorname{chart}(k, j)\end{array}\end{array}\right\}$
- Explicit loops over every possible value of $k$ and every context free rule: $\operatorname{chart}(i, j):=\{ \}$. for $k:=i+1$ to $j-1$
for every $A \rightarrow B C \in P$
if $B \in \operatorname{chart}(i, k)$ and $C \in \operatorname{chart}(k, j)$ then

$$
\operatorname{chart}(i, j):=\operatorname{chart}(i, j) \cup\{\mathrm{A}\} .
$$

## The Complete CYK Algorithm

Input: start category $S$ and input string

$$
\begin{aligned}
& n:=\text { length }(\text { string }) \\
& \text { for } j:=1 \text { to } n \\
& \quad \operatorname{chart}(j-1, j):=\left\{\mathrm{X} \mid \mathrm{X} \rightarrow \operatorname{word}_{j} \in \mathrm{P}\right\} \\
& \quad \text { for } i:=j-2 \text { down to } 0 \\
& \quad \operatorname{chart}(i, j):=\{ \} \\
& \quad \text { for } k:=i+1 \text { to } j-1 \\
& \quad \text { for every } A \rightarrow B C \in P \\
& \quad \text { if } B \in \operatorname{chart}(i, k) \text { and } C \in \operatorname{chart}(k, j) \text { then } \\
& \\
& \quad \operatorname{chart}(i, j):=\operatorname{chart}(i, j) \cup\{\mathrm{A}\}
\end{aligned}
$$

Output: if $S \in \operatorname{chart}(0, n)$ then accept else reject

## Example Application of the CYK Algorithm

$$

## Dynamic knowledge bases in PROLOG

- Declaration of a dynamic predicate: dynamic/1 declaration, e.g:
:- dynamic chart/3.
to store facts of the form chart(From, To, Category):
- Add a fact to the database: assert/1, e.g.:
assert (chart (1, 3, np)) .
Special versions asserta/1/assertz/1 ensure adding facts first/last.
- Removing a fact from the database: retract/1, e.g.:
retract (chart(1, , , np ) ).
To remove all matching facts from the database use retractall/1

## The CYK algorithm in PROLOG (parser/cky/cky.pl)

:- dynamic chart/3.
:- op(1100,xfx,'--->').
